Łukasz Langa  ambv CPython core developer 2 May

Hi,
Pablo and I would like to propose promoting **Diego Russo** ([diegorusso](#) 48 on GitHub) as a core developer.

Procesos

Contribuir a Python

No es solo escribir código

Procesos básico de contribución

La Python Developer Guide

The screenshot shows the Python Developer's Guide website. On the left is a sidebar with the Python logo and a list of navigation links: 'Getting started', 'Development workflow', 'Issues and triaging', 'Documentation', 'Testing and buildbots', 'Development tools', 'Core team', 'CPython's internals', 'Status of Python versions', and 'Python Contributor's Guide (draft)'. The main content area is titled 'Python Developer's Guide' and contains an introductory paragraph, a 'Quick reference' section with a checklist of steps, and code snippets for cloning the repository and building Python on macOS.

Python Developer's Guide

This guide is a comprehensive resource for [contributing to Python](#) – for both new and experienced contributors. It is [maintained](#) by the same community that maintains Python. We welcome your contributions to Python!

Quick reference

Here are the basic steps needed to get set up and contribute a pull request. This is a checklist, once you know the basics. For complete instructions please see the [Getting started](#) page.

1. Install and set up [Git](#) and other dependencies (see the [Git Setup](#) page for details).
2. Fork [the CPython repository](#) to your GitHub account and [get the source code](#).

```
git clone https://github.com/<your_username>/cpython
cd cpython
```

3. Build Python:

Unix [macOS](#) Windows

```
./configure --with-pydebug && make -j8
```

See also [more detailed instructions](#), [how to install and build dependencies](#), and [pages for Unix, macOS, and Windows](#).

4. [Run the tests](#):

<https://devguide.python.org>

Código

arm

```
py(location, &value, sizeof(value));

// 12-bit low part of an absolute address. Pairs nicely
// (below).
void
patch_aarch64_12(unsigned char *location, uint64_t value)
{
    uint32_t *loc32 = (uint32_t *)location;
    assert(IS_AARCH64_LDR_OR_STR(*loc32) || IS_AARCH64_
    // There might be an implicit shift encoded in the
    uint8_t shift = 0;
    if (IS_AARCH64_LDR_OR_STR(*loc32)) {
        shift = (uint8_t)get_bits(*loc32, 30, 2);
        // If both of these are set, the shift is supported
        // That's pretty weird, and it's never actually
        assert(get_bits(*loc32, 23, 1) == 0 || get_bits
    }
    value = get_bits(value, 0, 12);
    assert(get_bits(value, 0, shift) == 0);
    set_bits(loc32, 10, value, shift, 12);
}

// Relaxable 12-bit low part of an absolute address. Pa
// patch_aarch64_21rx (below).
void
patch_aarch64_12x(unsigned char *location, uint64_t value)
{
    // This can *only* be relaxed if it occurs immediately
    // patch_aarch64_21rx. If that happens, the JIT bui
    // calls with a single call to patch_aarch64_33rx.
    // here, and the instruction is patched normally:
    patch_aarch64_12(location, value);
}
```

Tocar Python de verdad

Python no es inaccesible

Empezar chico, con proceso.

El repositorio de CPython
